

Soft Eng 3M04
Mid-Term II 2002
Dr. Jacques Carette

Name: _____

Student No.: _____

-
- This midterm contains 9 questions on 3 double-sided pages (including this one).
 - This midterm will be marked out of 50. There are 55 total marks available.
 - Answer the question in the space provided.
 - Make sure that your name is on all sheets.
 - Do not separate the pages.
 - Make sure that you do not get stuck on one question; use your time wisely.
-

1. Over the alphabet $\Gamma = \{d, e, f\}$, give the BNF grammar which defines the language which contains the set of all strings that must either
 - (a) start with 'feed'
 - (b) contain the substring 'deff'.

Important note: this is NOT an exclusive or, meaning that 'feedeff' would be a string in this language. [5]

2. The type ' $a \rightarrow b \rightarrow c$ ' has 2 interpretations. Using words, describe both. [4]

3. List the 2 items that execution-based testing can identify, and the 1 item it cannot. [3]

4. Define 'module'. [2]

5. What are the 4 purposes of an MID ? [4]

6. Is javadoc a Litterate Programming tool ? (true or false) ? [1]

7. Given the declaration

```
val s : 'b seq
```

[Stars indicate increasing difficulty]

(a) Write an expression that states that all the elements of `s` are different. *[2]*

(b) * Write an expression that states that `s` contains 3 elements that are the same. *[2]*

(c) ** Write an expression that states that `s` is a sequence of integers, all of which are prime, sorted in increasing order. (You are allowed to use the predicate `isprime : int -> bool`). *[2]*

8. Simulate the following MIS. The simulation table is on the next page. [20]

MIS	MID																								
Used External Functions: NONE																									
Used External Data Types: 'a																									
Exported Constants: Max:int	Constants: Max := 3																								
Exported Functions:																									
<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="width: 10%;">Name</th> <th style="width: 20%;">Input Types</th> <th style="width: 20%;">Output Types</th> <th style="width: 50%;">Exceptions</th> </tr> </thead> <tbody> <tr> <td>A1</td> <td>'a</td> <td></td> <td>e1, e2</td> </tr> <tr> <td>A2</td> <td></td> <td>'a</td> <td>e3, e1</td> </tr> <tr> <td>A3</td> <td></td> <td></td> <td>e1, e3</td> </tr> <tr> <td>A4</td> <td></td> <td>bool</td> <td>e1</td> </tr> <tr> <td>A5</td> <td></td> <td></td> <td></td> </tr> </tbody> </table>	Name	Input Types	Output Types	Exceptions	A1	'a		e1, e2	A2		'a	e3, e1	A3			e1, e3	A4		bool	e1	A5				
Name	Input Types	Output Types	Exceptions
