

LAB KIT SAFETY PRECAUTIONS

1. Connect power by inserting the barrel-jack power plug into the socket beside the red on/off button. Connect the other end into a power outlet.
2. Connect USB by inserting the plug into the connector beside the barrel-jack power socket. Connect the other end into your computer.
3. Unplug the FPGA (Altera board) when not in use.
4. When using the FPGA, place it on a flat surface to allow air flow above and below the board. Ensure it stays within its operating range {0-80°C}. NEVER place it on fabric, soft plastic or any material that prevents proper air circulation.
5. Take care handling the board as the pins on the bottom are sharp.
6. Do not let anything, especially conductive surfaces or objects come into contact with the board.
7. Do not bring food or drink near the FPGA.
8. Place the FPGA in a safe spot to ensure it cannot fall off your table.
9. Keep your workspace clean and free of obstructions.
